## DETAILED ACTION

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on June 21, 2006 has been entered.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 16 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Austin (US 755,431) in view of Sundstrand (US 2,001,075).

With regard to claim 16, Austin discloses a food processor with substantially all of the claimed structure including:

1. a feed tube (a, a');
2. the feed tube (a, a') including a continuous inner feed surface that defines a feed cavity (a, a');

3. a moveable gate (D, page 2, lines 6 and 7) moves within the feed cavity (a) and pivots within the feed cavity (a); and
4. the moveable gate (D, page 2, lines 6 and 7) pivots between an open position (where the opening for food is greatest) and a compacting position (where the opening for food is smallest in order to compact food).

Austin discloses a feed tube but does not disclose that it extends from a top lid wall. In a closely related art, Sundstrand discloses a food processor with a feed tube extending from a top lid wall (8) in order to engage a jar. Therefore, it would have been obvious to one skilled in the art at the time the invention was made to provide Austin with a feed tube extending from a top lid wall in order to engage a jar, as taught by Sunstrand.

With regard to claim 24, Austin discloses a sub-feed cavity defined by a compacting surface of the movable gate (D) and at least a portion of the inner feed surface of the feed tube (a).

#### ***Allowable Subject Matter***

Claims 17-23 and 25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### ***Response to Arguments***

Applicant's arguments with respect to claims 16 and 24 have been considered but are moot in view of the new ground(s) of rejection.

Applicant's arguments with respect to claims 17-23 and 25 have been considered but are moot because they have been indicated allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
